- Industry: High Tech

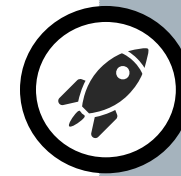

**Antoine Clerel-Moreau**  
Mechanical Engineer  
SAVOY ELECTRONIC LIGHTING

*"The 3DEXPERIENCE® platform on the cloud becomes our reference tool for the management of our industrial processes"*

### CHALLENGES

As a new entity in the Savoy International Group, Savoy Electronic Lighting had two major goals :

- **Implement their quality system** in order to achieve IATF 16949 certification
- **Improve their PLM system** while reducing costs and offloading maintenance to IT.

### SOLUTION

The Global CAD+PLM offer through the 3DEXPERIENCE® platform has been able to respond to a large part of our constraints, it is a **robust system** that has become our main tool for the **management of industrial processes** and that **significantly improves the management of our data**.

### BENEFIT

Thanks to the transposition of a part of our quality system, we have saved time to reach the IATF 16949 certification. The platform facilitates our daily work by **eliminating document management tasks** while **freeing up our IT to maintain the system**. We also save money by capitalizing on licenses for both CAD and PLM systems.
